THOMAS REYNOLDS

Technical Talent

ABOUT ME

I've been interested in coding since middle school! I started out with coding some games and simple scripts in BASIC. Now, my technical skillset includes over four years of academic and self-taught experience with several programming languages, frameworks, and theoretical aspects of computer science.

I've also worked in the IT field, in which I've gained valuable experience working with end users and honing my general troubleshooting skills. I love learning new things and am eager to join your team!

EDUCATION

Drake University
August 2018 – May 2022
B.S. Computer Science / Data Analytics

WORK EXPERIENCE

Covetrus – IT Technician
June 2021–August 2021
Staged printers and workstations for a new Warehouse Management System. Provided remote support for different distribution centers.

Drake University ITS – IT Help Desk
August 2020–May 2022
Took phone calls and responded to tickets, troubleshooted issues remotely and directly with end users.

PROJECTS

GiveMeFilm – Movie Recommendation Website
Worked with a team to develop a website that would generate movie recommendations for users. Utilized a React frontend and a Flask backend, with MongoDB Atlas to store data. PyTest for unit testing.

Habitat for Humanity – Case Study
Developed a simple React app to quickly estimate the cost of a given Habitat for Humanity project using a GLM generated in R.

Bank Failure Research
Automated the process of cleaning and adding data to a MySQL database using Python. The data was used to answer machine learning questions regarding historic bank failure.
